Hello, Hope someone can help me I found this interesting valve circuit to build but I'm not sure how many amps/watts it would need to run successfully? How would I work this out? I have added a link to the page so you can have look at it. Thanks heaps.

I enjoyed reading it too, I haven't implemented any of them. For too long I have been in the no

tone controls camp, but after reading this I have to rethink some of this.If you implement any of the article circuits please report back.cheersPaba
