Is anyone using Adobe Soundbooth? I'm interested to know more and hear feedback about this audio editing software. What do you think of its features? How does it compare with other audio editors?

They have replaced Soundbooth CS5 with Adobe Audition CS5.5. It is part of the new Creative Suite. I don't use it myself but a friend of mine is a huge fan. She loves Audition and the whole Creative Suite. I haven't gotten try it but I have seen and heard the results. It is pretty good!

Thanks...It looks like I'm already behind and I need to be updated on the latest audio editor or software releases. I definitely have to check out Adobe Audition CS5.5.
