I just got off the phone with a guy named Tom Hendry from Three Rivers Gold Plating Company in Fort Wayne, Indianna. We're doing some business and he's a real nice guy. Anyway, we talked for a while about gold plating trim and chassis parts for tube hi-fi rigs, turntables and things like that. They do gold, silver and other precious metals. It occured to me that some of you might be interested in this for your projects. Here are some examples:I thought gold plating would add a nice touch to some of the projects here, so I thought I'd post a link.Wayne
