---

Hello, I have a floor model radio/phonograph in good condition

117 Volts

60 Cycles

60 Watts (normal)

80 Watts (phonograph operating)

WG&C Series 17A99-969

Its a 3 speed turntable, and 2 of the speeds work fine. It seems to have all the original parts and tubes (although I am not an expert, just what it looks like to me)and both the radio and phonograph work practically perfectly. It has some very minor scratches on it.

My question is what year is it and how much is it worth?

Any help would be greatly appreciated!

Thanks!!!
