Hi guys, first of all sorry for my bad english....

I would ask you an advice:

two years ago I built two Pi-one speakers for my quite little system room ( 4mt x 4,5mt and 3,5mt high) ) and (even if very happy of my One's) I was thinking about upgrading to Pi-Three....

Do you think my room is big enough for using those speakers?

Better go for Pi-two towers?

Thank you very very much!

Regards

Andrea

Either model will work fine in that room.

Either model will work fine in that room.

Thank you very much, Wayne!

Do you think that Pi-4 are suitable too?

I'm using the Pi-1 with two subwoofers but would avoid them with the next pi's...

But do not dismiss your subs so quickly. I recommend them for all models of loudspeakers. They're not just there for added bass extension, but also for modal smoothing. This is even more important in a small room.

Room modes, multisubs and flanking subs

High-Fidelity Uniform-Directivity Loudspeakers

Thank you, Wayne! Really interesting topics!

Could you please send me plans for Pi-3 and Pi-4?

Thank you very much!

Please decide which of those two models you prefer and let me know. I'll send the plans when you have decided.
