Here is an intersting amplifier schematic on Kevin Kennedy's website.I like the looks of this design from a simplistic viewpoint. But, I am not sure about the use of a 12AU7 as the front end and phase slitter though.Anyone with experience to share about this vacuum tube and possible amplifier circuits, will be greatly appreciated?ThanksNorris Wilson

Hey-Hey!!!,It is after all a triode. Pick a load 4x the plate Z, keep it within dissipation limits, and even if you go PP, set the B+ so it remains Class A.Should be better than the triode strapped 6V6, and plate ratings are similar...:) It's better(IMO) to use a single-grid valve if you want a triode. Triode strapped pentodes seem a 2nd choice to me in comparison. cheers,Douglas

DIY audio has a whole thread on building an amp out of this tube. With schematic and pictures.

Subject: Cool, thanks! (nt)

Sound Practices had a schematic for a PP amp using a 12BZ7 driver - I was always planning to build one of these using a Kepco power supply - just to check it out...
