I was thinking about listening to FM stations, something I haven't done in a long time, to get some ideas for new music.

Anyway, I looked for the antenna jack, and I found the one attached. I've never seen one like this, so I have no idea what kind of plug to get to hook up an antenna.

If people actually listen to FM anymore, I figured someone here would know.

Floyd

That's a PAL connector. You can get them at C.Crane and I think Radio Shack has them too. You might want to get an adapter that connects to a coax connector like used for cable TV.

Thanks! Coax was what I had in mind for the antenna.

You know that you are responsible for my sudden interest in music.

I was perfectly content to watch mindless movies until I got some of your speakers.

Hi, They will also generally accept a push on type F connector like on a normal US CATV system.

I appreciate that. Those are easy to find. I don't want to put up a big antenna, but twin lead is awful crummy to work with.
