Have you had success with a home theater system with wireless speakers? I've always thought that traditional wired speakers were the best way to go, but wireless seems to be getting more popular.

I don't mind wireless for background music and maybe surrounds, but I don't think I'd want my main system using wireless feeds. Not yet, I think the technology is still maturing. Not really the technology, more the implementation - all the wireless systems are for commercial or inexpensive home systems, nothing in the high-end market. Still, it sounds pretty good and I think is good enough for background sound.

Well it's good to hear that the sound with wireless is pretty good, but I guess my suspicions have been confirmed. Maybe one day wireless will be dominant, it has the convenience advantage. I'm glad to hear that I'm not missing out on anything at the moment though.
