He was referring to the large 100 watt resistor with aluminum heat sink.

I couldn't recall having one of those big aluminum hundreds 'cause I din't:

Used 4- 25 ohm cementos.

Oh, yeah. Now that you show me that picture, I remember seeing it before. Now I remember you talking about substituting that monster block with a group of ten-watters, totally fine 'cause you're running tube amps.

parts. Might wanna get out your handy-dandy meter and check across R3 to see.

Too lazy to open her up and it's been a long time since I had to have parallel and series explained to me as bare naked resistors on the beach....  
I ohmed the speaker terminals and got 9 on one, 10 ohms on the other speaker which is interesting 'cause the left channel with 10 ohms always seems to have a dB or so more output.
