Hello, can I have the 3pi plans please?

also do you have any experience using b&c drivers, like this one for example:
<http://www.bcspeakers.com/product.php?id=65>

Thank you!

You've got mail!

The B&C drivers are good. I really like their compression drivers. But I am not as impressed with their woofers. It's not that they're bad - they're fine - but they're not as good as JBL or Acoustic Elegance. I'd say they're pretty much on par with Eminence.

At any rate, there are none that are drop-in replacements for the woofers in any of my loudspeaker models, so stick with the recommended drivers shown in the plans for best results.
