Hey all

How about this for an off-the-shelf solution?:

<http://www.standsandmounts.com/vtirfseries13inchcenterchannelspeakerstandrfc.aspx>

The right height (13") and it has an inbuilt 6 degree tilt. Looks pretty good to me but I'd love to hear any other thoughts.

That looks like it would work just fine. If you get a set of those, report back how they work for you.

I use wood stands with the top plate pretty close in size to the cabinet size. The back edge has a lip that cradles the speaker. I also use rubber underneath to grip the speaker. Between the rear lip and the rubber underneath, the speaker is planted nicely and doesn't move.
