I purchased a laptop last year, and at the time it was the newest and most high tech one on the market. By now, it's probably out dated. Oh well! Anyway, it has Beats Audio as it's speaker system and I love it. Does anyone else use a Beats Audio system? How do you like it?

I have never heard of it. The only thing I have heard even remotely "Beats" is the electronics by Dr. Dre. I assume you are not talking about that?

I use an older laptop, so I do not have that option. However, I do think I know what you are talking about. I have seen some Best Buy commercials advertising it.

I wouldn't be that worried, I always considered a new computer to be fine for a few years. They age quickly but if you just got it last year, you should be good for a while.

As for Beats Audio, my best friend got a new laptop a couple months ago that has it. We're both pretty impressed, for a laptop it sure works pretty well.
