I have a friend's Altec A7 VOTT sitting in my spare room needing a new crossover and CD diaphragm. The CD is a 802D and the bass driver is a 416A. The XO components have been dipped in black gunk so no values are readable. Anybody have or know where a crossover schematic is available? Also, I'll need a replacement diaphragm and don't know where to find them.

I'd sure like to get this monster out of my room...

The XO number is N-500-E. Can't find a schematic on my internet searches.

Dave

Thanks Wayne! I'd bet the D and E versions are similar, so should work. I really want this out of my back room.

Dave
