Hi Wayne, quick question regarding 4pi cabinet lining - what's the rationale for lining one side and not the other?

The placement was determined largely empirically, with mathematical models to guide me at first, and then verified by measurements. Sheets line three sides and a sheet lays on the cross-brace between woofer and tweeter, spanning the cross-section on most models. But the sides covered are different in some models, e.g. top or bottom, front or back.
