Hi,

Can you send me the 4 pi plans? I am really interested in building a set for my home theater LCR setup.

I do have an issue with the height of 26 inches, would it be possible to remove 1 to 2 inches? If there was any other way to avoid this I would but I am squeezed for space. If I made the top of the cabinet right at the top of the horn would that be possible?

Thanks

---

You've got mail!

As for mods, please see the FAQ section about "Cabinet design". In particular, see the link called "Cabinet design, port placement and internal standing waves" and all those under that, down to "Altering dimensions". Those speak to the matter of cabinet mods.

Thanks for your quick reply! I knew it wasn't a simple answer, you definitely gave me a lot to think about.
