Hi,

I have been interested in the CV horns for some time now and would like to build a pair now that I have a room with good corners!

Am curious to know if a 2" CV midrange horn has / can be built for use w/ a set of JBL 2441 drivers.

Thanks!

Sorry, but all my designs use 1" compression drivers and the midhorn in the constant directivity cornerhorns uses a 10" driver.

OK, - that's not a deal breaker. Using the 2" driver is not mandatory for this project.

I am still interested in looking at the 6pi plans to see how they might integrate into my house.

Thank you,

m@
