Hi everyone,  I added a pair of tube based projects to the group build projects list.  One is the headphone amp and the other is a pair of small mono blocks.  The headphone amp delivers really nice sound and is pretty easy to build. No special parts and not complicated.  The mini mono blocks are also rather uncomplicated and the results are quite exceptional IMHO.  They are now the ones in use in my main system.  Both projects use Edcor trannies and the ones for the mono blocks are available as a set for a modest discount.  Both the power and output trannies were custom for Oddwatt Audio, but I allowed them to release them for individual customers. Now if I could just figure out how to link the projects to the text life would be good.

Folks, this post needs some attention.  Both projects are excellent, and appear to be easy to build.  I know we're all getting ready for the holidays so hobby projects get shelved for a while but bookmark this one for "as soon as you can get to it."

Bruce, thanks again for your contributions here.  Really, really, really neat stuff.
