Does anyone make little speakers that fit unobtrusively in a set of glasses or sunglasses? As small as cell phone speakers are, I would think it's feasible.

I haven't heard of anything like this before, but it is a good idea. If you can't find anything like them I would send the idea to a manufacturer!

Are you kidding, cell phone speakers sound like S__t. That's like buying the old Bose speakers. No high's no Lows, at worse it would be even worse than the Bose.

Yup. Oakley has had different variations on that theme for many years now. Here's one that's unfortunately discontinued, but they may have new models.

I really think this is a genius idea for those of us who find earbuds very uncomfortable, but like to listen to music outside. The Oakley bluetooth version would be perfect. However the Oakley site is hard to navigate and I couldn't tell if those were available or discontinued too.
