Just run the output of the Behringer to an input on your integrated amp. Whatever is connected to the Behringer's inputs will be presented to your ASL integrated amp.

Hello,then I can run Aux. from the Intergrated to the inputs on theBehringer DCX2496 ,run the output from the Behringer to the Directinputs .There's a switch on the front that separates preamp fromamp,so you can use amp with another preamp.I hope I don't have toas I have nice tubes in the Antique Sound Labs preamp 6sn7.Thanks for your time Denise
