New church sanctuary will be 3000 sq ft with 16 ft ceiling and 270 person seating capacity. What style of speakers, amp and soundboard would you suggest?

Have you spoken to a sound technician who specializes in churches? Sound systems for a church have to be able to handle speaking as well as music. The angle of the walls, the types of building materials and where people will sit are all important considerations when choosing a sound system. It is difficult to make a recommendation without more details.

We're still waiting to see if our offer is going to be accepted on the property and won't have access for another month or so minimally. Hopefully I'll be able to get more details then. Thanks for your info, I sure do appreciate it.

I was glad to help. I have to say proper sound systems in church is kind of a pet peeve of mine. I hate going and sitting in the one spot in the church where you can't hear anything because it is a dead spot. Good luck.
