I am interested in the 7 Pi speaker, but I only have a bay window corner can put it (a cut-cornered right angle corner). Will the arrangement affect the sound?

If the window, frame and surrounding structure don't rattle, it will be fine. The biggest problem is windows that are able to slide open usually vibrate in their tracks (and make a buzzing sound). So make sure that doesn't happen and if there's no rattle, you're set.

Great! Can you send me the Pi 7 plan?
