I stumbled across this awesome website called helpfulwaves.com, and I am trying to create a mobius coil with which to play some of the frequencies. Does anyone here know of a way to see if I made the coil correctly? For instance, is there some sort of equipment for measuring that will tell me?

It's omnicosmics. You'll need an atomic vector plotter to align it, and if you don't it might scatter the tachyons in your brain. So be careful.

Of course, I have a ton of questions now.

First, what exactly is omnicosmics? I tried googling it but I only get results referring to a book instead of information.

Hi, If you ask too many questions the spooks will come to get you. They don't want anyone to mess with gravity waves.

Well then, it looks like me and the "spooks" may need to have a nice little chit chat about the virtues of truth and knowledge. After our nice little talk with tea, I'll ask for book recommendations suitable for an amateur wanting to learn about physics.
