Just found the Pass Zen amp PCB I ordered from aX a couple of years ago. I was thinking of throwing this together before my B'head SEX kit arrives. Just curious if this amp is worth building, and, if so, could someone please share their experience and possibly some helpful tips.....Colin

Like you, I also ordered that board with the greatest of intentions...but still have it. As I recall, several "evolutions" of that project developed, I recall people at the time being positive about it, but the preamp seemed to really grab people. I still have that board as well! Good luck, Russellc
