Dear Semiconductor forum. This is a nice amp available in kit form, from Perth WA. It uses a low voltage regulated supply (outboard). I added a couple of extra filtering caps. The amp case was built using 3mm plate steel. Its heavy but certainly helps with both cooling and shielding. I am able to use solid core sterling silver on the input and its completely hum free. (infact silver is used for all connecting wires) The only obvious problem is the fact that I have no soft start circuit. I should add a switch to mute the speakers on switch on. Sounds as sweet as pie! but needs a good quality active pre to drive. The power supply can get quite hot on balmy evenings in the sub tropics?? Kits available at <http://www.altronics.com.au/index.asp?area=item&id=K5109> Happy listening Howard
