Over the weekend I discovered the free SoundHound app. It listens to music and identifies the song and artist for you. SoundHound also displays the lyrics in real time. It's a pretty neat little app.

Hi Chicken, I have SoundHound on my phone and I love it. It works great when there is a new song on the radio or one that I have heard before and am not sure of the title. Let's face it, half the time I'm waiting for the radio host to say the name of the song and it doesn't happen. It's cool the way the lyrics will scroll in real time so you can sing along.

I don't have any music recognition apps, but that does sound pretty cool and free is always good. I may download SoundHound. Does it work on Android?

Audioaudio90, it does work with Android phones. You can find the app here. It really is a good app and works for every song I need information on. The only time I had a problem was when I only had a few seconds left to the song. If there is not enough identifying music it can't pick it up.
