My husband and I are putting together our own home sound system. We are looking for speaker systems and have been impressed with the Pi design. Is there a Pi speaker that is best suited for home theater use?

My home theater employs 6Pi corner horns, a 3Pi center channel and 3Pi surrounds. The sound is immersive and really brings movies and music alive. The tonal balance of the 6Pi and 3Pi matches very well resulting in smooth panning effects and soundstage stability. The 2Pi surrounds previously used created a more diffuse surround effect and didn't produce quite as cohesive sound, although they might be a better choice where a lower cost or smaller loudspeaker is preferred.
