Whenever I try to see what enclosure WinISD has for 2 woofers it yields a box twice as big as for 1 woofer.

How can there be so many speakers with 2 woofers, or more, MTMs come to mind, that are not side-by-side refrigerators?

Maybe add the second woofer in its own separate box, as a helper woofer? It will be more flexible that way, and you can use that to your advantage.

Helper Woofer Location

Iron-law, right? Small, loud, low--pick-two. Give-up effic or bass and you're home free. There's always EQ and active stuff. Besides, nothing says refrigerators are All bad (and you get 16Hz organ w/o needing no steenkeen subs).
