I'm new here and am wondering what is the best match for the 7pi corner horns for a Home Theater with AT screen? Is it the 8pi? I've started collecting parts for my build and have the JBL 2666h woofers and the B&C 250DE compression drivers.

I'm pretty excited to have this project underway.

Thanks,
Robert

I've asked the same question and the consensus is the four pi.

I explored the idea of using a modified seven pi for center channel duty but I'm convinced using the four pi instead makes the most sense.

Here's where I posed the question...

I have not built my corner horns yet but I'm itching to whack up some plywood.

Drive out to ABQ and we can build two sets!

Nice thanks for the post, your thread was a good read. Anyone have the 4 pi and 3 pi sub plans?

Just ask Wayne for the plans.
