I am seeing more and more about this Oculus Rift virtual reality headset, plus others like it. This is purely speculative, but what do you guys think the audio quality is going to be like on a virtual reality headset?

I am not sure without testing them myself. I guess we will have to wait and see how popular they become. I am waiting to read more reviews on them.

I think that Oculus Rift headset might already be out, so you might be able to do some research and find the audio specs. I think the audio and visual quality are both going to be pretty good, though. Otherwise it's not going to pass for "virtual reality."
