Hi Wayne

I'm gearing up to build my 4Pi crossovers and am using the H290C horn, the JBL 2226, and the B&C DE250. I remember there being a change to the crossover design to accommodate the new horn, but can't seem to find the specifics through a forum search. Would you mind helping out with this? Thanks very much.

Tried a bit more searching on some different strings this morning and found it. Additional of RS, 16 ohms, and removal of C1.

I'll be placing an order shortly for the x-over PCBs. I've DIY'd enough x-overs to know those boards are a bargain
