Hi Wayne-

Planning my 2pi tower build campaign for later this summer. May I please have a copy of the plans. Also, I'm running a decware zen kit amp that I built, somewhere between 1.8 and 2.5 Wpc depending on what one reads. I would like to stick with the 2pi but wondered if you sell, or know of an easy way to push the sensitivity as high as possible for use with such a lower power amp. Thinking drop in replacements for the tweeter and woofer but a quick forum search didn't yield the info I was looking for. That said, I'd also like to keep costs down so maybe not possible or easy but thought I'd ask. Thanks!

-Corey

You've got mail!

There are no optional drivers though. If you want higher sensitivity, you'll have to use one of our larger models.
