A follow up question from the Pro Audio Forum about the midhorn dispersion. What is the dispersion of your midhorn because I can not find it in the literature?

Second question: I will be coming out of the midhorn loaded with JBL 2012s at 1200 HZ into JBL 2450s. I have my choice of JBL horns 2382A (120 X 40) or 2380As (90 X 40).

Which JBL horn would match up best with your midhorn?

Thank you,

Bill

The midhorn provides 90° x 40° coverage when used as intended, sitting in a corner.
