I own this set of speakers: JBL 2225h, 2105h and JBL JBL 2403h. My idea is to build a compact reflex speaker and would like to load with an horn the JBL 2105h. In the project Seven PI mid Horn are used a JBL 2012 or a Delta 10, speakers 10" while my JBL 2105 is a 5" and must be cut higher. What horn I have to build? Surely throat and mouth will be lower than the ones of the Seven PI mid Horn. I want to use these speakers unused for some time. In addition what cuts of crossover do you recommend? Anyone can help me?
Thank you for all
Giuseppe

That sounds like an excellent project. I absolutely loved those 2105 midranges - I used them for some time. But they are not suitable for the midhorn I use with 10" drivers.
