I'm new to music equipment and I'm trying to find some good subwoofers for my car along with a new set of speakers. Any suggestions?

You may be better off asking this at a car audio website.

This site is more home audio oriented, but perhaps bringing this to the top may help you.

Good luck.

Subs are subs. Just be sure the driver and enclosure are tuned properly. If the subwoofer driver is to be installed in a cabinet, use traditional calculations to size the box and port (if vented or bandpass). If the driver will be open to the trunk (which is somewhat rare these days) then it is best to select a driver suitable for infinite baffle, because the trunk volume is rather large for a driver with small surface area.
