Hi Wayne,

I think I've settled on your 4 PIs for my next build. I have a few questions.

- 1) Can you share with me the plans for cabinet and XO?
- 2) Can I use the SEOS 15 waveguide if I go with B&C DE250s?
- 3) Are reconed JBL 2226h viable?
- 4) Would you recommend this speaker for classic rock?

Thanks so much in advance.

Greg

Sorry..

Not sure if it matters, but I usually listen at high SPL levels.. My room is 12x16 and partially treated.

Thanks again.

Greg

Answers by numbers:

1. You've got mail!
  2. No. The two devices are distinctly different. Please see the H290C waveguide thread for more info.
  3. Reconed 2226H are good as new provided the service is done by a qualified technician and the parts are genuine OEM.
  4. This speaker is a high-fidelity uniform-directivity loudspeaker, suitable anywhere high quality and high SPL capability are desired. It's good for low-level monitoring or high-level theater applications.
