Hey Wayne!

I'm wondering what the dimensions are for the speaker terminal plate cutout on the back of the speaker box should be for the 4 Pi? I'm not sure if I'm using the right terminology, sorry. Where you hook up the speakers. That little square in the back. And how far from the bottom would you make it? Thanks! I searched for this first, but my search skills may not be the best.

The binding post plate we ship in the kits needs a 2-1/8" x 2-7/8" hole cutout.
