All of us love good sound but it can be costly to purchase a sound system that will always consist of multiple speakers. I have heard that it is still possible to synchronize the speakers you may have.

How can this be done? I am looking at a way in which the speakers can play the exact same music at the exact same time. This looks like a cheaper option though I know it is not easy to synchronize speakers.

In the same room?
An av receiver is the cheapest way, can be had very cheap used.
