How effectively and efficiently can I get the best out of a tutor speaker for my car? I like the way they sound but unfortunately not everyone gets sound matters right nowadays. Also, which brand(s) would you recommend?

I know someone who has a pair of JBL speakers and they sound really amazing. I'm not sure what model they are but I'll try to find out. I've heard that Alpine is also a good choice.

I have several tutor speakers in my car but I have never been keen on the brand. To me, this doesn't matter a lot, provided I get quality sound while at it.

I normally get all my speaker concerns sorted by a techy-friend of mine that I have known since our days in college.

I have to admit that until I joined this forum and started hanging out here, I had never given the sound in my car much thought. The things I've been able to learn here and implement have changed the sound in my car for the better.

I just bought myself a set of high quality speakers at wholesale price from Alibaba express. They are from Global Tutor Speakers.
