Technology keeps on changing and now you will most likely have heard of the Dolby Atmos and Auro 3D. Assuming you have the latest surround speakers, must you spend more or is there a trick you can use so as to achieve the cinematic experience on your own?

Creating a cinematic experience at home sounds like a really brilliant idea but I think you cannot rule out spending a little more to create such an atmosphere.

I read that the best option we can try is to set it as 7.1 surround sound with eight separate audio channels. Now that probably sounds tough to achieve if you don't have a big budget. You can try working on the room atmosphere for alternative.
