Hi all.

I just finished building a pair of 1 Pi speaker kits.

When I went to install the drivers, there was no 16 Ohm damping resistor included in the kit.

Is this part obsolete? Was I meant to source this myself?

Thank you,
Josh

Sorry, Josh, no. Those should have been included.

We can send you the resistors or you can send us the cable assemblies and we'll install them for you.

So sorry for your inconvenience!

Hi Wayne,

Best just send me the resistors. It will be much easier to just pop out the tweeter and solder in a resistor than take it all apart.

I'll send you a PM to make sure you have the correct info.

Thanks again,
-Josh
