Has anyone of you ever tried to integrate a subwoofer with a home theater? I have been told that this is a good way to experience accurate sound. The much I know about subwoofers is that they help to reproduce low-end frequencies, something that most speakers are not capable of. I always love that room-shaking bass when watching a movie.

Look up multisubs and flanking subs.

I have always had an interest of optimizing multiple subs in a room. I have heard people going for those with 3 to 4 submodules. Another challenge would be in setting up the subwoofers in a room.
