This is described as the science of manipulating matter with sound waves.

Do you think we are anywhere near being able to do this? From what I understand, sound waves are used in the medical field, but not to the extent as described above.

I think we could be closer to this capability if there were more of a market for it. In other words, how could one make money from this technology?

Sad but true A3, sad but true.

I saw something on T.V. about this years ago about how some ancient culture, in South America I think, may have harnessed that "technology".

It's a fascinating thought.

Sound energy is like any other energy. Too much energy can cause damage. Especially when an object gets into resonance.
