Does anyone know what the recommended driver recess depth should be for the 2pi tower drivers? I think the tweeter is around 1/4" but I'm not sure if I should allow more for the gasket and not sure what the Eminence driver depth is. Thank you!

The Eminence midwoofer mounting flange is 0.385" thick - a little over 3/8" - including the built-in gaskets. The Vifa tweeter flange is 0.200" but has no built-in gasket.

Great, thank you. I want to make sure I can adequately build the cabinets before I start ordering drivers, so do not yet have them to measure.
