can someone tell me which pro-ject TT is best to get? I might just save a bit more and get one of these but im not too sure which one to get. Some of them have the pre amp already in them and i think the project 2 makes you manually change the speed by lifting the turntable off n stuff, most of the lps are in the same speed though right, so it might just be for a couple of eps or something. So takin into consideration all this whats best value for under US\$400 or so? THANKS.
