I am just used to the 1-neck guitar. It wasn't easy for me to learn it. Interestingly, there is a 6-neck and 12-neck guitar out there.

Can you imagine that? I saw someone playing the 6-neck version and I just sat there with my mouth agape. Whoever thought of such instruments must have been a creative genius. Has any of you come across it before?

I'd never heard of any such thing so I just had to look it up. I have even come across a video where six people are playing a 6-neck guitar. It is interesting that there are a lot of unique instruments out there, that most people have never heard of.

I had heard of a double neck guitar but never 6-8 neck guitars. I had to go check it out myself on YouTube. There is a video of 8 guys playing an eight neck guitar. Amazing!

I never knew the number of necks went that high! I've only seen double-neck ones and I'm not sure if I've ever seen one played (until today on YouTube). I'm pretty sure it's always been in pictures. Some of these videos are amazing! Still trying to find one with a 12-neck guitar though.

I had never heard of anything but a double neck guitar. I've actually seen people play those. It is still kind of amazing that they can get such different sounds out of the same guitar, though.

I know exactly how you feel. I've been stuck on a regular one-neck guitar for years, and it still took me ages to get comfortable with playing it.

The first time that I saw a video of an artist playing a six neck guitar, I was just staring with no words coming out of my mouth. I concluded that he is super talented!

I mean, anyone who goes to that level of playing a six-neck guitar is a genius. Watching someone do it live still feels like a dream to me. I wonder if anyone has seen those playing the twelve-neck type because I am yet to see one.
