This seems too narrow of an arc of travel for absolute fidelity. Anyone use this combo?

Bob Soden picked one up around Christmas time, but it was still in pieces last time I saw it. He said he put it together but I don't know what steps he took to adjust it. I'll check with him and see how it turned out.

Sounds good. Ask him if he talked to VPI about the 9" JMW and how it tracks across the record. Thanks.
