Hi, Recently I had to custom wind some crossover coils. I had lots of gear that was supposed to measure the inductance, but the results were inconsistent. The meter below

https://www.amazon.com/Signstek-M4070-AutoRanging-accuracy-display/dp/B00GYT5WL8

Works quite well. Nearly idiot proof and auto ranging. Accurate to under 1% on the precision capacitors and resistors I have and within the specified tolerance on tested inductors (often 2-5%). IMO a worthy addition to the bench of anyone that needs to match components or do coil winding. I'm sure there are other sources, but none deliver to me as quickly as the big "A".

Thanks for the heads-up, Bruce!
