Before I leave this world, I want to make a custom looking stereo. I will buy all the compenets to make it work, but the casing I want to build myself.

What do you think of rounding the corners on every piece of a stereo? Even the speakers?

Hi, I guess it depends on how round you make them. Minor rounding is OK by me as it doesn't hurt so much when you crash into it. Big time rounding might look OK, just not for me.

I think it would look alright. Try to make it look natural with the speaker itself sitting in the middle. Look at that ad that is on the board here for for pi speakers to get an idea of what I'm talking about.
