Does anyone know of any streaming services with lossless audio? I know that Spotify was apparently testing it at some point, but I haven't been able to really hear any difference. I hear some good things about Tidal, but I hear negative things more frequently. Does anyone here use Tidal? Can you tell a significant difference between it and Spotify? Is there another streaming service out there I should be looking into?

I currently have both Tidal and Spotify. I can tell the difference in quality between the two. Tidal is superior, in my opinion. That being said, it has some downfalls. Maybe it's something on my end (I don't think it is), but I have to deal with a lot of buffering. Additionally, and this might not be a problem for you, but a lot of the music is hip-hop. That's not really my thing, unfortunately.
