Subject: Which bluetooth speakers?

I am wondering about investing in some bluetooth speakers for my lounge. My house dates back to the Georgian era (I am in the UK), and the rooms are fairly big with high ceilings.

I wondered which bluetooth speakers might be suitable for this size of room, and also which makes might be good for this purpose.

I would get a floor model. It puts out more than a desk model and you can put it wherever you need to to get the best sound.

A Bluetooth speaker in a Georgian house.....there's a juxtaposition I thought I'd never see.

How about going for WiFi speakers because these normally run on AC power? I haven't heard of the floor Bluetooth speakers but is there a chance that they also run on AC power? It seems this is a tough choice indeed!

Yes, there are Bluetooth speakers that use AC power. They're actually pretty common. Whether you go for Wi-Fi speakers, Bluetooth speakers, or speakers that can connect through both, make sure your internet signal and controlling device can reach them.
